August 31, 2008

Monthly Commentary

Overview

Economic data was mixed again for August, if slightly weaker than past months. The durable goods order number and factory numbers were reported at slightly higher levels than expected, and the second quarter GDP was revised upwards to 3.3%, but the payroll numbers contracted for the seventh consecutive month, the unemployment rate of 5.7% is expected to continue to rise, initial jobless claims continued to go up, and nonfarm payrolls posted a loss of approximately 51,000 jobs. Most inflation-related numbers remained substantially higher than would satisfy the Fed. The market and economy continues to be fragile, with Producer Price Index (PPI), Consumer Price Index (CPI) and Core numbers higher than expected. At the FOMC's August 5 meeting, the Fed held rates steady. The decision, however, was not unanimous, with Fed member Richard W. Fisher voting to increase the federal funds rate. The market largely believes the Fed will halt rate cut activity for the rest of 2008.

Strategy

- Given economic uncertainty and a Fed appearing to be holding rates steady, we maintained a neutral stance with respect to the Government Portfolio's WAM.
- We selectively purchased 1- to 4-month agency obligations.

Outlook

- We are structuring the portfolios to reflect the current situation in the credit market.

Security Type Breakdown (%)

Historical Yields (%)

	Portfolio
7-day current	1.75
7-day effective	1.77
30-day effective	1.75
Annualized 1-month	1.74

As of August 31, 2008, the fund's nonsubsidized yields were 1.67%, 1.69%, 1.67%, and 1.66% respectively, and its simple (7-day) yield, gross of all fee waivers and expense reimbursements, was 2.39.

Yield quotations more closely reflect current earnings of the money market fund than total return quotations. Yields are subject to change.

The holdings shown are provided for informational purposes only and should not be deemed as a recommendation to purchase or sell the holdings mentioned. Morgan Stanley is a full-service securities firm engaged in securities trading and brokerage activities, investment banking, research and analysis, financing and financial advisory services.

Investment Performance (% net of fees)*

Average annual total return (Periods ending August 31, 2008)

The inception date for this performance record is November 1, 2004.

Performance data quoted represents past performance, which is no guarantee of future results, and current performance may be lower or higher than the figures shown. For the most recent month-end performance figures, please visit www.morganstanley.com/msim or call 1-888-378-1630. Investment returns will fluctuate and fund shares, when redeemed, may be worth more or less than their original cost.

Portfolio Profile

Objective

The Government Portfolio seeks preservation of capital, daily liquidity and maximum current income.

Philosophy

We believe that a conservatively managed portfolio of liquid, high-quality debt securities issued by the U.S. government may maximize current income while preserving capital and liquidity.

Process

The management team follows an investment process that seeks to select maturities based on the shape of the money market yield curve and on expectations as to future shifts in the level and shape of the curve, taking into consideration such factors as current short-term interest rates, Federal Reserve policy regarding interest rates and U.S. economic activity.

See reverse for important information

Performance Definitions

Annualized 1-month yield A simple annualized net yield. It differs from the 30-day yield in that it accounts for the actual days in the month, which can be 28, 29, 30, 31, 32, 33 or 34 days depending on the number of days in the months and a fund's accounting procedure. The monthly dividend factor is converted to a monthly yield. The following formula is used:

$$\text{Annualized 1-month yield} = \frac{\text{monthly div. factor}}{\# \text{ of days in fund's month}} \times 365 \times 100$$

Nonsubsidized yield The nonsubsidized yield reflects what the yield would have been had a fee and/or expense waiver not been in place during the period shown.

Yield definitions The 7-day current yield is an annualized net yield in which it is assumed that the income earned on the principal is not reinvested in the fund. The effective 7-day and 30-day net yields are annualized net yields that describe the amount one is expected to earn over a 1-year period assuming that dividends are reinvested at the average rate of the last 7 days or 30 days, respectively.

Total return A measure of a fund's performance that encompasses all elements of return: dividends, capital gain distributions, and changes in net asset value. Total return is the change in value of an investment over a given period, assuming reinvestment of any dividends and capital gain distributions, expressed as a percentage of the initial investment.

The following formula is used:

$$[(1 + \text{monthly div. factor}) \times (1 + \text{monthly div. factor}) \text{ for past 12 months} - 1] \times 100$$

Portfolio Characteristics Definitions

Weighted average maturity Maturity measures the number of days remaining in the life of a bond. The weighted average maturity of the portfolio represents the market-weighted average of the maturities of the portfolio's individual holdings.

Credit ratings Ratings represent the opinions of the rating agency as to the quality of the securities they rate. Ratings are relative and subjective and are not absolute standards of quality. The portfolio's credit quality does not remove market risk.

Morgan Stanley Institutional Liquidity Fund (MSILF) MSILF is a high-quality institutional mutual fund offering seven different cash management portfolios.

Fund adviser The Morgan Stanley Institutional Liquidity Fund (MSILF) is managed by Morgan Stanley Investment Management, Inc.

For additional information, please call 1-888-378-1630.

Risk Considerations

An investment in the portfolio is neither insured nor guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although the portfolio seeks to preserve the value of your investment at \$1.00 per share, it is possible to lose money by investing in the portfolio. The portfolio is managed to maintain its stable \$1.00 per share price.

The prices of fixed income securities respond to economic developments, including interest rate changes. Indeed, prices tend to be inversely affected by changes in interest rates. Accordingly, the portfolio is subject to interest rate risk, and in a rising interest rate environment, portfolio shares can decline in value.

Other Considerations

The Lipper Institutional US Government Money Market Average tracks the performance of all funds in the Lipper Institutional US Government Money Market Funds classification. The Average, which is adjusted for capital gains distributions and income dividends, is unmanaged and should not be considered an investment.

Fees The Adviser has voluntarily agreed to reduce its advisory fee and/or absorb other expenses so that the total operating expenses of each portfolio's Participant Class will not exceed 0.70%. The current total expense ratio for the portfolio's Participant Class is 0.62%.

The forecasts and opinions referenced are those of the fund's portfolio management team as of date of publication, are subject to change at any time due to changes in market or economic conditions, and are not necessarily those of Morgan Stanley Investment Management.

The MSILF portfolio returns are reported for Participant Class shares, which have an ongoing 25 basis point (0.25%) 12b-1 fee, which affects performance.

*MSILF returns are net of fees and assume the reinvestment of all dividends and income. Returns for less than one year are cumulative (unannualized). MSILF returns are reported for Participant class shares. Performance for the other classes will differ. The Adviser has voluntarily agreed to waive a portion of its fees and/or reimburse expenses if annual operating fees exceed certain levels. Absent of these waivers, if any, returns would have been lower. Fee waivers and/or reimbursements are voluntary and the Adviser reserves the right to terminate any waiver and/or reimbursement at any time.
