In our mind, the key to answering these key questions is materiality.

**ESG: Why materiality matters**

ESG investing is specifically focused on evaluating the investment viability of companies through an ESG lens:

- Is a company focused on ways to minimally impact the environment as they make decisions?
- Does it treat its employees and suppliers fairly?
- Does it have the appropriate governance structure in place to deliver results in an ethically sustainable way while managing risk?
- How is a company progressing in its quest to improve its ESG behavior?

“For ESG integration to improve financial results, companies have to focus on the specific ESG issues that will have a material impact on their business.”
But for ESG investing to improve financial results, companies have to focus on the specific ESG issues that can have a material impact on their business. For example, a financial services company renovating a corporate headquarters to be LEED-certified is great for the environment, but that in itself will likely not materially help its bottom line. However, a food distributor reworking supply chain logistics to minimize truck routes will improve the carbon footprint of the planet and reduce fuel costs, a material outcome.

Similarly, asset managers must pay attention to material ESG factors when evaluating companies to build a portfolio. Applied Equity Advisors understands that materiality matters, and with increasing evidence that ESG influences performance results, our investment process for all of our actively managed equity products systematically integrates ESG analysis into our stock selection process. Additionally, we have a strategy that launched in 2018, Global Concentrated ESG Equity, which leverages our integrated and systematic ESG analysis and additionally screens out companies in certain industries.

Why ESG integration matters: Research results

While there is plenty of research that indicates that companies focusing on ESG factors do better financially, one study in particular provided evidence that focusing on material ESG factors can lead to superior investment results.

“CORPORATE SUSTAINABILITY: FIRST EVIDENCE ON MATERIALITY”

Aaron Yoon (Kellogg Business School), Mozaffar Khan (University of Minnesota) and George Serafeim (Harvard Business School), the authors of “Corporate Sustainability: First Evidence on Materiality 2015,” set out to quantify a correlation between a company’s ESG initiatives and financial results in the form of their stock price returns. They felt that providing evidence of positive results when investing in companies with strong ESG performance would allow investors to make better decisions about the value of firms’ ESG programs.

The research concluded that not all ESG investments are created equal when it comes to generating returns. The best approach was to buy stock in companies that prioritize ESG issues that are material to core business practices for a company’s particular sector.

The researchers ranked companies based on a materiality score. They created a portfolio of firms that scored highly on material sustainability issues and compared its stock returns to those of a portfolio of firms that scored poorly on those issues. The difference in stock returns was clear over a 22-year horizon (1992-2013). On an annualized basis, the portfolio of firms that scored high on materiality delivered returns that were higher than those of the other portfolio.

“Our paper shows that investing in ESG was not value-disrupting,” Yoon says, “as long as the ESG investments the companies make improve materiality.”

The Applied Equity Advisors investment process: Emphasizing the material

Many asset managers claim to have addressed ESG issues in their investment process. But what does this really mean? Some might merely exclude “sin” stocks. Others might rely on unadjusted third-party ESG rankings. Others still might talk with company management.

The Applied Equity Advisors team uses elements of screening, company engagement and third-party ESG rankings. But it does so holistically. Our key differentiator is that we systematically integrate ESG analysis into our investment process by thoroughly evaluating those ESG issues that are material to the companies under our investment microscope.

Being a core equity manager, that link was essential. Our primary mandate is to deliver performance relative to our benchmark, regardless of the market style (valuation, growth, quality) that is in favor. Integrating ESG analysis into our stock selection means utilizing a framework that can be applied to any type of stock, not simply those that are considered “green.”

The Applied Equity Advisors investment process is built on the basis of two engines (Display 1). The first engine is the team’s proprietary Style Positioning Engine, designed to determine positioning with regard to broad market factors, such as growth, valuation or quality.

Our second engine is our Stock Selection Engine. In selecting stocks, Applied Equity Advisors seeks to first choose those companies that can achieve

the desired factor positioning from a style and regional perspective prior to conducting its in-depth stock analysis.

The ESG analysis integrated in the Stock Selection Engine starts with a sustainability screen across five dimensions categorized by the Sustainability Accounting Standards Board (SASB):

1. **ENVIRONMENT**
2. **SOCIAL CAPITAL**
3. **HUMAN CAPITAL**
4. **BUSINESS MODEL & INNOVATION**
5. **LEADERSHIP & GOVERNANCE**

It is important note that we objectively choose not to rely solely upon third-party ESG rankings, as we find that ESG data is imperfect, might have a lag, and represents only a single point of view. More importantly, we find that third-party rankings do not always focus enough on ESG factors that are material to a business, and thus do not tell the complete story.

To help determine the ESG issues most relevant for a given company, our internal analysts license the intellectual property behind the SASB Materiality Map®, a critical resource that pinpoints sustainability issues that have been identified as likely to affect the financial condition or operating performance of companies within an industry.

“The guidance and information provided by the SASB Materiality Map® allows the Applied Equity Advisors team to be efficient with its resources and spend time on what matters, or is truly material to the desired outcome.”
Risk Considerations
There is no assurance that a portfolio will achieve its investment objective. Portfolios are subject to market risk, which is the possibility that the market values of securities owned by the portfolio will decline and may therefore be less than what you paid for them. Market values can change daily due to economic and other events (e.g. natural disasters, health crises, terrorism, conflicts and social unrest) that affect markets, countries, companies or governments. It is difficult to predict the timing, duration, and potential adverse effects (e.g. portfolio liquidity) of events. Accordingly, you can lose money investing in this portfolio. Please be aware that this portfolio may be subject to certain additional risks. In general, equities securities’ values also fluctuate in response to activities specific to a company. Stocks of small-and medium-capitalization companies entail special risks, such as limited product lines, markets and financial resources, and greater market volatility than securities of larger, more established companies. Investments in foreign markets entail special risks such as currency, political, economic, market and liquidity risks. Illiquid securities may be more difficult to sell and value than publicly traded securities (liquidity risk). Non-diversified portfolios often invest in a more limited number of issuers. As such, changes in the financial condition or market value of a single issuer may cause greater volatility. ESG Strategies that incorporate impact investing and/or Environmental, Social and Governance (ESG) factors could result in relative investment performance deviating from other strategies or broad market benchmarks, depending on whether such sectors or investments are in or out of favor in the market. As a result, there is no assurance ESG strategies could result in more favorable investment performance.

Singapore: This publication should not be considered to be the subject of an invitation for subscription or purchase, whether directly or indirectly, to the public or any member of the public in Singapore other than (i) to an institutional investor under section 304 of the Securities and Futures Act, Chapter 289 of Singapore (“SFA”), (ii) to a “relevant person” (which includes an accredited investor) pursuant to section 305 of the SFA, and such distribution is in accordance with the conditions specified in section 305 of the SFA; or (iii) otherwise pursuant to, and in accordance with the conditions of, any other applicable provision of the SFA. This publication has not been reviewed by the Monetary Authority of Singapore.
Australia: This publication is disseminated in Australia by Morgan Stanley Investment Management (Australia) Pty Limited ACN: 122040037, AFSL No. 314182, which accepts responsibility for its contents. This publication, and any access to it, is intended only for “wholesale clients” within the meaning of the Australian Corporations Act.
Japan: For professional investors, this document is circulated or distributed for informational purposes only. For those who are not professional investors, this document is provided in relation to Morgan Stanley Investment Management (Japan) Co., Ltd. (“MSIMJ”)’s business with respect to discretionary investment management agreements (“IMA”) and investment advisory agreements (“IAA”). This is not for the purpose of a recommendation or solicitation of
transactions or offers any particular financial instruments. Under an IMA, with respect to management of assets of a client, the client prescribes basic management policies in advance and commissions MSIM to make all investment decisions based on an analysis of the value, etc. of the securities, and MSIM accepts such commission. The client shall delegate to MSIM the authorities necessary for making investment. MSIM exercises the delegated authorities based on investment decisions of MSIM, and the client shall not make individual instructions. All investment profits and losses belong to the clients; principal is not guaranteed. Please consider the investment objectives and nature of risks before investing. As an investment advisory fee for an IAA or an IMA, the amount of assets subject to the contract multiplied by a certain rate (the upper limit is 2.20% per annum (including tax)) shall be incurred in proportion to the contract period. For some strategies, a contingency fee may be incurred in addition to the fee mentioned above. Indirect charges also may be incurred, such as brokerage commissions for incorporated securities. Since these charges and expenses are different depending on a contract and other factors, MSIM cannot present the rates, upper limits, etc. in advance. All clients should read the Documents Provided Prior to the Conclusion of a Contract carefully before executing an agreement. This document is disseminated in Japan by MSIM, Registered No. 470 (Director of Kanto Local Finance Bureau (Financial Instruments Firms)), Membership: the Japan Securities Dealers Association, The Investment Trusts Association, Japan, the Japan Investment Advisers Association and the Type II Financial Instruments Firms Association.
