When every data business looks like a target – *separating signal from noise in financial information services*

INVESTMENT INSIGHT | INTERNATIONAL EQUITY TEAM | November 2025

In recent months, investors have become preoccupied with the question: will advanced artificial intelligence (AI), be it generative (GenAI) or agentic, disrupt the data-rich industries that underpin our modern world? From software through consulting to information services, credit bureaux, exchanges and insurance brokers, few data-rich industries have escaped the market's blanket derating.

At the time of writing, the sell-off in financial information companies such as S&P Global, MSCI, Moody's and LSEG has been swift and indiscriminate, reflecting a growing fear that Advanced AI could erode these companies' competitive advantages. In this piece we home in on this single industry and our assessment of companies' moats in the face of potential disruption.

As we see it, such sweeping reactions often mark moments of opportunity. For example, MSCI's share price pullback early in the third quarter offered an attractive entry point into a company we believe can offer steady margin expansion and earnings growth, fuelled by ongoing revenue increases and operating leverage. The market's instinct to "act first, analyse later" can overlook the complexity of what actually constitutes a durable moat in the world of data. As bottom-up high quality investors, our task is to assess, on a case-by-case basis, **where new technology can and cannot erode the foundations of enduring franchises.**

Three shades of disruption

We find it helpful to categorise Advanced AI-related disruption into three broad types. The first and most severe—what we call *systemic disruption*—occurs when a new technology enables the almost overnight creation of a credible "new tech" competitor, undermining market share and network effects. In software, this might mean a small, agile competitor suddenly matching an incumbent's capabilities with minimal investment. Google's success with Nano Banana against advanced Photoshop products is a recent example.

The second, *material disruption*, reshapes business models rather than eliminating them. Here, incumbents may need to reinvent pricing structures or delivery models to stay relevant—as we saw in software companies with the rise of the cloud.

AUTHOR

ANTON KYRACHOK
Executive Director

“These companies have a decent opportunity to win from Advanced AI adoption. Tools that augment analysts' productivity, accelerate credit assessment, or improve client interfaces have the potential to enhance a company's revenues and reduce costs rather than threaten margins.”

Finally, there is *secondary disruption*, where Advanced AI simply lowers input costs or accelerates product development. This is the bucket into which most financial data and analytics companies fall. GenAI makes data collection and code writing cheaper, but the underlying business model and client demand—for trusted, accurate, regulated information—remains largely unchanged. Provided the company successfully innovates, Advanced AI may be an advantage rather than a threat.

The real moats: data, ecosystems, and integration

We believe financial information services are not easily replicated. Their moats are built on several interlocking defences.

The first is **data ownership**. Proprietary or *branded* datasets, like MSCI's indices or Moody's credit ratings, are effectively irreplaceable. While anyone can, in principle, build equity indices or opine on corporate creditworthiness (and many have tried!), it is the trust and familiarity of MSCI and Moody's branded datasets that form an enduring moat. However, even ownership of *clean public data* can be a source of competitive differentiation. Re-creating decades of historical, verified data—with consistent identifiers and linkages—is both technically challenging and prohibitively expensive.

The second is the **ecosystem effect**. Ratings and indices function as a common language for global capital markets; they work because everyone else uses them. Once embedded in regulatory frameworks, benchmarks, and investment mandates, they become part of the financial system's infrastructure—as is the case with S&P Global.

Third, **integration into client workflows** creates powerful switching costs. Platforms are wired into the daily operations of asset managers, traders and analysts—via application programming interfaces (APIs), terminals, and risk systems—making disruption a costly and risky endeavour.

Other defences include global **distribution networks**, enterprise-grade **security** that satisfies regulatory scrutiny, and increasingly frictionless **user interfaces** (UI). While UI innovation may be easy for start-ups to copy, integration, trust and compliance are not.

“Data activators”: moats built on language and trust

S&P Global, Moody's and MSCI—what we call “data activators”—sit at the top of the information services value chain. Their key branded franchises convert raw data into actionable insight and, crucially, commonly understood vernacular. A Moody's credit rating or an MSCI index does

not derive its value from the difficulty of computation but from its universal recognition and acceptance—a good example of the ecosystem effect in action.

Over 70% of the profits of these firms stem from areas that are, in our view, largely insulated from Advanced AI disruption. While some secondary exposure exists—such as MSCI's ESG data aggregation or S&P Global's financial desktop offering—we believe these risks are modest compared with the market's recent reaction.

Equally, these companies have a decent opportunity to win from Advanced AI adoption. Tools that augment analysts' productivity, accelerate credit assessment, or improve client interfaces have the potential to enhance a company's revenues and reduce costs rather than threaten margins. The ability to train models on a company's extensive proprietary data is also an under-appreciated advantage. When the likes of S&P or MSCI embed Advanced AI within their own infrastructure, it raises the competitive bar for would-be disruptors rather than lowering it.

“Data aggregators”: shallower moats, still defensible

By contrast, firms such as FactSet or parts of the London Stock Exchange Group (LSEG) act as “data aggregators”, curating and delivering third-party information rather than owning data. Their moats are not built on ownership of unique branded data, but on how they *organise, validate, and securely integrate* vast volumes of information for clients.

For institutional investors who upload millions of sensitive portfolios each day, trust and reliability matter more than novelty. We believe the market's assumption that AI start-ups will easily replicate such infrastructure ignores the operational and regulatory constraints of handling confidential financial data. Clients have a very low tolerance for errors. Few chief risk officers would be comfortable feeding their firm's trading positions into an untested AI model hosted by a venture-backed challenger.

Similarly, the “plumbing” of live market data—fibre connections to exchanges, cloud-based transmission, and entitlement systems—is capital-intensive and highly regulated. Even where Advanced AI lowers coding costs, new entrants still face substantial barriers to matching the incumbents' physical and compliance infrastructure.

While aggregators' moats may be shallower than those of activators, they are far from non-existent. Their strength lies in *integration, distribution and security*—attributes that are difficult to automate and essential for client retention.

Advanced AI as opportunity, not existential threat

The irony of the recent broad-based sell-off is that Advanced AI, rather than undermining incumbents, may ultimately strengthen them. By reducing the cost of coding, data cleansing and interface design, Advanced AI enables faster innovation and productivity gains. For companies already operating at scale with established trust and distribution, these tools can deepen competitive advantage rather than erode it, and those with pricing power are able to hold on to revenue gains.

In credit ratings, for instance, Advanced AI can help analysts process new issuers faster, shortening time-to-market and improving margins. In risk analytics, Advanced AI-enabled interfaces may widen product adoption across investment teams. These are incremental yet meaningful enhancements that reinforce the incumbents' position.

Separating signal from noise

Markets rarely price nuance well. When fear of disruption becomes indiscriminate, quality investors can play offence

rather than defence. There remains a case for selection: it's important to probe every business model for resilience, as well as take account of valuation and position size. But the financial information sector's comprehensive recent de-rating looks to us like a textbook example of the market throwing out the proverbial baby with the bathwater.¹

We continue to view S&P Global, Moody's and MSCI as among the most resilient franchises in global data. We believe their defences—proprietary data, ecosystem embeddedness, workflow integration and distribution reach—are formidable. The so-called "AI threat" may, in time, become a driver of renewed efficiency and innovation across their businesses.

As ever, our approach remains disciplined and long-term focused: to distinguish genuine structural risk from cyclical narrative, to focus on quality and valuation, and to remember that durable moats—especially those built on trust, regulation and reputation—tend to outlast the headlines.

Risk Considerations

There is no assurance that a portfolio will achieve its investment objective. Portfolios are subject to market risk, which is the possibility that the market value of securities owned by the portfolio will decline. Market values can change daily due to economic and other events (e.g. natural disasters, health crises, terrorism, conflicts and social unrest) that affect markets, countries, companies or governments. It is difficult to predict the timing, duration, and potential adverse effects (e.g. portfolio liquidity) of events. Accordingly, you can lose money investing in this strategy. Please be aware that this strategy may be subject to certain additional risks. Changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, government regulation and economic conditions may adversely affect global franchise companies and may negatively impact the strategy to a greater extent than if the strategy's assets were invested in a wider variety of companies. In general, **equity securities**' values also fluctuate in response to activities specific to a company. Investments in **foreign markets** entail special risks such as currency, political, economic, and market risks. **Stocks of small- and mid-capitalisation companies** carry special risks, such as limited product lines, markets and financial resources, and greater market volatility than securities of larger, more established companies. The risks of investing in **emerging market countries** are greater than risks associated with investments in foreign developed markets. **Derivative instruments** may disproportionately increase losses and have a significant impact on performance. They also may be subject to counterparty, liquidity, valuation, correlation and market risks. **Illiquid securities** may be more difficult to sell and value than publicly traded securities (liquidity risk). Non-diversified portfolios often invest in a more limited number of issuers. As such, changes in the financial condition or market value of a single issuer may cause greater volatility. **ESG strategies** that incorporate impact investing and/or Environmental, Social and Governance (ESG) factors could result in relative investment performance deviating from other strategies or broad market benchmarks, depending on whether such sectors or investments are in or out of favor in the market. As a result, there is no assurance ESG strategies could result in more favorable investment performance.

¹ To "throw the baby out with the bathwater" means to throw away something valuable while getting rid of unwanted things.

IMPORTANT INFORMATION

There is no guarantee that any investment strategy will work under all market conditions, and each investor should evaluate their ability to invest for the long-term, especially during periods of downturn in the market.

A separately managed account may not be appropriate for all investors. Separate accounts managed according to the particular Strategy may include securities that may not necessarily track the performance of a particular index. A minimum asset level is required.

For important information about the investment managers, please refer to Form ADV Part 2.

ASIA PACIFIC

Hong Kong: This material is disseminated by Morgan Stanley Asia Limited for use in Hong Kong and shall only be made available to "professional investors" as defined under the Securities and Futures Ordinance of Hong Kong (Cap 571). The contents of this material have not been reviewed nor approved by any regulatory authority including the Securities and Futures Commission in Hong Kong. Accordingly, save where an exemption is available under the relevant law, this material shall not be issued, circulated, distributed, directed at, or made available to, the public in Hong Kong. **Singapore:** This material is disseminated by Morgan Stanley Investment Management Company and should not be considered to be the subject of an invitation for subscription or purchase, whether directly or indirectly, to the public or any member of the public in Singapore other than (i) to an institutional investor under section 304 of the Securities and Futures Act, Chapter 289 of Singapore ("SFA"); (ii) to a "relevant person" (which includes an accredited investor) pursuant to section 305 of the SFA, and such distribution is in accordance with the conditions specified in section 305 of the SFA; or (iii) otherwise pursuant to, and in accordance with the conditions of, any other applicable provision of the SFA. This publication has not been reviewed by the Monetary Authority of Singapore.

Australia: This material is provided by Morgan Stanley Investment Management (Australia) Pty Ltd ABN 22122040037, AFSL No. 314182 and its affiliates and does not constitute an offer of interests. Morgan Stanley Investment Management (Australia) Pty Limited arranges for MSIM affiliates to provide financial services to Australian wholesale clients. Interests will only be offered in circumstances under which no disclosure is required under the Corporations Act 2001 (Cth) (the "Corporations Act"). Any offer of interests will not purport to be an offer of interests in circumstances under which disclosure is required under the Corporations Act and will only be made to persons who qualify as a "wholesale client" (as defined in the Corporations Act).

This material will not be lodged with the Australian Securities and Investments Commission.

JAPAN

For professional investors, this material is circulated or distributed for informational purposes only. For those who are not professional investors, this material is provided in relation to Morgan Stanley Investment Management (Japan) Co., Ltd. ("MSIMJ")'s business with respect to discretionary investment management agreements ("IMA") and investment advisory agreements ("IAA"). This is not for the purpose of a recommendation or solicitation of transactions or offers any particular financial instruments. Under an IMA, with respect to management of assets of a client, the client prescribes basic management policies in advance and commissions MSIMJ to make all investment decisions based on an analysis of the value, etc. of the securities, and MSIMJ accepts such commission. The client shall delegate to MSIMJ the authorities necessary for making investment. MSIMJ exercises the delegated authorities based on investment decisions of MSIMJ, and the client shall not make individual instructions. All investment profits and losses belong to the clients; principal is not guaranteed. Please consider the investment objectives and nature of risks before investing. As an investment advisory fee for an IAA or an IMA, the amount of assets subject to the contract multiplied by a certain rate (the upper limit is 2.20% per annum (including tax)) shall be incurred in proportion to the contract period. For some strategies, a contingency fee may be incurred in addition to the fee mentioned above. Indirect charges also may be incurred, such as brokerage commissions for incorporated securities. Since these charges and expenses are different depending on a contract and other factors, MSIMJ cannot present the rates, upper limits, etc. in advance. All clients should read the Documents Provided Prior to the Conclusion of a Contract carefully before executing an agreement. This material is disseminated in Japan by MSIMJ, Registered No. 410 (Director of Kanto Local Finance Bureau (Financial Instruments Firms)), Membership: the Japan Securities Dealers Association, The Investment Trusts Association, Japan, the Japan Investment Advisers Association and the Type II Financial Instruments Firms Association.
