Point of View

# The Volatility Politic: Trade the Noise, but Invest With the Fundamentals

FIXED INCOME | GLOBAL FIXED INCOME TEAM | MACRO INSIGHT | 2017

If it weren't for political uncertainty and risks, there would be much less volatility in the market. In the past twelve months, meaningful spikes in volatility can be attributed to political events, not market events as was typical (Display 1). This is unlikely to end anytime soon and we must accept that it has become part of the fabric of the market. Like it or not, we need to find opportunities to trade around these events.

Every politics-related spike in volatility in the past twelve months has so far been short-lived and has resulted in higher asset prices in the aftermath. Perhaps the pattern is that investors de-risk ahead of the event and then reinvest after the event—a strategy that has worked well in this period, but why? Perhaps it is because economic fundamentals have been strong and cash levels in portfolios high—meaning an event that drops prices is a buying opportunity.

This week, we are heading into another prime-time political event with James Comey, former head of the FBI, scheduled to testify before the Senate Intelligence Committee on Thursday, June 8th. This is likely to break down along party lines and is unlikely to yield a material result. To quote Andy Laperriere, political analysts from Cornerstone Macro in a research report released June 1:

"It is almost inconceivable and bordering on delusional that GOP majorities in Congress will impeach President Trump based on what we know today or any reasonable inferences from what we know today."

JIM CARON

Managing Director

Global Fixed Income Team

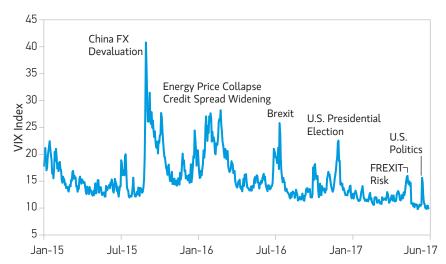

The economic and market risk of this event is that it slows down Trump's ability to pass tax and regulatory reforms. But I think this is largely reflected in prices already. Importantly, after Comey's testimony this week, the "event-risk" will simply be put behind us. Investors will then be left to focus on things like good economic data and earnings, and may look forward to focusing on ramped-up rhetoric on U.S. tax reform going into the August congressional recess.

Politics are hard to square with markets, but we offer an approach to incorporating it into our decision-making process. We see political event risk as being closely associated with who controls the narrative and the timeline in which it is released. This is why news leaks tend to break late on Friday afternoon in order to become the narrative of the Sunday news programs that, in turn, set the news cycle for the upcoming week.

#### **Conclusion**

If there's a dip, buy it. You may even consider buying it ahead of the event –if there is a dip. Our view is that politics is noise, fundamentals are real. Trade the noise, but invest with the fundamentals.

#### IMPORTANT DISCLOSURES

This material is for use of Professional Clients only, except in the U.S. where the material may be redistributed or used with the general public.

The views, opinions, forecasts and estimates expressed are those of the portfolio manager as of date presented and are subject to change at any time due to market, economic or other conditions, and may not necessarily come to pass. Furthermore, the views will not be updated or otherwise revised to reflect information that subsequently becomes available or circumstances existing, or changes occurring, after the date of publication. The views expressed do not reflect the opinions of all portfolio managers at Morgan Stanley Investment Management (MSIM) or the views of the firm as a whole, and may not be reflected in all the strategies and products that the firm offers.

Forecasts and/or estimates provided herein are subject to change and may not actually come to pass. Information regarding expected market returns and market outlooks is based on the research, analysis and opinions of the authors. These conclusions are speculative in nature, may not come to pass and are not intended to predict the future performance of any specific Morgan Stanley Investment Management product.

All information provided is for informational and educational purposes only and should not be deemed as a recommendation. The information herein does not contend to address the financial objectives, situation or specific needs of any individual investor. In addition, this material is not an offer, or a solicitation of an offer, to buy or sell any security or instrument or to participate in any trading strategy. The information herein has not been based on a consideration of any individual investor circumstances and is not investment advice, nor should it be construed in any way as tax, accounting, legal or regulatory advice. To that end, investors should seek independent legal and financial advice, including advice as to tax consequences, before making any investment decision.

#### **RISK CONSIDERATIONS**

There is no assurance that a Portfolio will achieve its investment objective. Portfolios are subject to market risk, which is the possibility that the market values of securities owned by the fund will decline and that the value of fund shares may therefore be less than what you paid for them. Accordingly, you can lose money investing in this portfolio. Please be aware that this portfolio may be subject to certain additional risks. Investing involves risks including the possible loss of principal. Fixed income securities are subject to the ability of an issuer to make timely principal and interest payments (credit risk), changes in interest rates (interest rate risk), the creditworthiness of the issuer and general market liquidity (market risk). In the current rising interest rate environment, bond prices may fall and may result in periods of volatility and increased portfolio redemptions. Longer-term securities may be more sensitive to interest rate changes. In a declining interest rate environment, the portfolio may generate less income. Mortgage- and asset-backed **securities** are sensitive to early prepayment risk and a higher risk of default and may be hard to value and difficult to sell (liquidity risk). They are also subject to credit, market and interest rate risks. Certain **U.S. government** securities purchased by the strategy, such as those issued by Fannie Mae and Freddie Mac, are not backed by the full faith and credit of the U.S. It is possible that these issuers will not have the funds to meet their payment obligations in the future. **High-yield securities** ("junk bonds") are lower-rated securities that may have a higher degree of credit and liquidity risk. Public bank loans are subject to liquidity risk and the credit risks of lower-rated securities. Foreign securities are subject to currency, political, economic and market risks. The risks of investing in **emerging market** countries are greater than risks associated with investments in foreign developed countries. Sovereign debt securities are subject to default risk. **Derivative instruments** may disproportionately increase losses and have a significant impact on performance. They also may be subject to counterparty, liquidity, valuation, correlation and market risks. Restricted and illiquid securities may be more difficult to sell and value than publicly traded securities (liquidity risk). Due to the possibility that prepayments will alter the cash flows on collateralized mortgage obligations (CMOs), it is not possible to determine in advance their final maturity date or average life. In addition, if the collateral securing the CMOs or any third-party guarantees are insufficient to make payments, the portfolio could sustain a loss.
