- Investment involves risks. Key risks for this fund include Risk of Investment in Equity, Concentration Risk, Risk associated with Investments in the PRC, Risk associated with Investments in China A-Shares via Stock Connect, Emerging Market Risk and Exchange Rate Risk.
- There is a risk that you may potentially lose your entire investment in this Fund.
- The investment decision is yours but you should not invest unless the intermediary who sells it to you has advised you that it is suitable for you and has explained why, including how buying it would be consistent with your investment objectives. You should not make any investment decision solely based on this document. Please read the relevant offering document carefully for further fund details including risk factors.

**Performance Review**

In the one month period ending 31 December 2025, the Fund's A shares returned -0.53% (net of fees)<sup>1</sup>, while the benchmark returned 2.72%.

In the quarter ended 31 December 2025, the Fund's A shares returned -8.84% and the benchmark returned 4.29%.

Year-to-date (YTD), the Fund's A shares returned 4.74% and the benchmark returned 32.26%.

The Global Opportunity team creates a high conviction, concentrated portfolio of undervalued, high quality businesses. The long-term investment horizon and high active share approach can result in periods of performance deviation from the benchmark. The Fund underperformed the MSCI All Country Asia ex Japan Index this quarter due to unfavourable stock selection and sector allocation.

**Market Review**

Asia ex Japan equities advanced during the quarter. The information technology, energy, materials and financials sectors outperformed the benchmark, while the consumer discretionary, communication services, health care and consumer staples underperformed the benchmark.

**Portfolio Review**

A sector overweight allocation to consumer discretionary, a sector underweight allocation to information technology and stock selection in industrials were the greatest overall detractors from relative performance. Top individual detractors included Korean ecommerce platform Coupang, Chinese autonomous driving technology company Pony AI, Southeast Asian super app Grab, Chinese digital freight platform Full Truck Alliance and an underweight position in Taiwan Semiconductor Manufacturing Company.

Conversely, a sector underweight allocation to health care and stock selection in consumer staples and consumer discretionary were the greatest overall contributors to the relative performance of the portfolio during the period. Top individual contributors included lifestyle company Titan, an underweight position in Tencent Holdings, Indian private sector bank Axis Bank, an Indian e-commerce marketplace and an Indian non-banking financial company.

Shares of Coupang declined after reporting a cybersecurity incident involving unauthorised access to customer accounts. We are closely monitoring the issue, and note that the company activated an incident response, disabled the threat actor's unauthorised access, reported the incident to authorities and warned customers of potential impact. Based on company filings, no customer financial information or login credentials were compromised in the incident. Coupang is Korea's largest ecommerce company, operating under a first-party and third-party model, with a focus on building a next-generation customer experience by enabling a large selection of items at low prices delivered on the same or next day, with a frictionless return process. For example, the average Rocket delivery time was under 12 hours and 99% of orders were delivered within one day.<sup>2</sup> We believe Coupang is unique due to its scalable logistics infrastructure, low customer acquisition cost structure, loyal customer base of nearly 14 million paid subscribers<sup>3</sup> to its Rocket WOW membership programme, and a growing third-party marketplace that may be further monetised through advertising and fulfilment services. The company's differentiation and efficient scale may enable it to gain share of a fragmented ecommerce market, with the potential to extend its ecosystem beyond its core business and establish strong positions in new

<sup>1</sup> Source: Morgan Stanley Investment Management. Data as of 31 December 2025.

<sup>3</sup> Source: Coupang company data as of 30 June 2025.

verticals such as food delivery and fintech. Coupang currently accounts for a small percentage of Korea's overall ecommerce market, which is projected to exceed \$336 billion by 2027,<sup>4</sup> and we have seen from other geographies that an ecommerce market leader can capture as much as one-sixth of the country's total retail sales.<sup>5</sup>

Shares of Pony AI have been under pressure as widening net losses, high operating costs and investor concerns over profitability weighed on sentiment, while continued volatility across the autonomous driving sector and profit-taking following prior gains added to selling pressure. We believe our investment thesis remains valid: Pony AI is a leading Level-4 autonomous driving company operating a fleet of driverless robotaxis and robotrucks through partnerships with major original equipment manufacturers. Pony AI is the only autonomous vehicle company in China to have secured all permits required for public-facing robotaxi operations across all four Tier 1 cities. Its strong technology intellectual property and data network effects create a self-reinforcing advantage: greater fleet scale drives more data, improving model performance and regulatory acceptance, which in turn attracts more users and partners. Based on its disclosure as of 28 October 2025, it had over 720 robotaxis with more than 48.6 million km of cumulative autonomous driving mileage, including 26.9 million km from its public-facing robotaxi services. We believe Pony AI is well positioned to become a major robotaxi operator in both China and international markets, benefiting from the lower costs, higher safety and near-continuous operating capability of autonomous vehicles.

Shares of Titan outperformed given healthy consumer demand in a strong festive season, which supported robust earnings growth despite continued competitive intensity. Titan is India's leading lifestyle company, with market leading positions in the jewellery, watches and eyecare categories. As India's per capita gross domestic product increases, we believe demand for its product suite, especially jewellery, will likely stay strong. Separately, regulatory reforms and digitisation are making unorganised sectors unprofitable. Titan has been actively deepening its product base to cater to people across economic spectrum and entering new cities/towns, enabling its customer base to increase. We believe these factors can help Titan deliver strong revenue growth for multiple years. It manages its supply chain quite effectively, which has enabled it to generate returns on invested capital that are nearly double those of its closest peers.

Axis Bank is one of the largest private sector banks in India with a strong deposit franchise and a network of almost 6,000 domestic branches and extension counters.<sup>6</sup> In the past five years, Axis Bank has focused on strengthening its balance sheet and investing in technology, and we believe it's likely to see an acceleration in market share gains. Investment in technology enables it to deliver products at lower incremental costs, which we believe can help support strong return on equity (ROE) for the next few years.

## Outlook

Quality underperformed by the largest percentage in over 20 years in 2025, trailing the MSCI All Country World Index by 424 basis points (bps) globally.<sup>7</sup> The rotation has benefited shares of lower quality cyclicals characterised by slower growth, lower profitability and higher debt, in a market driven by exuberance for artificial intelligence (AI) and more accommodative monetary policy.

This dynamic has been more pronounced in Asia ex Japan as quality underperformed the region by 1,111 bps in 2025,<sup>8</sup> driven by a rotation into lower quality businesses, particularly in industries where we are underweight, including semiconductors and AI hardware, metals and mining, machinery and heavy industrials. These industries are inherently more cyclical and are driven by shorter-term trends, which align less well with our long-term, fundamentals-based investment approach. Our portfolio has historically underperformed in similar rotational market environments, where top-down factors outweigh bottom-up fundamentals.

Despite a more challenging market environment to navigate, our investment philosophy remains unchanged. We have high conviction in our portfolio holdings, supported by strong execution stories and robust fundamentals. Our portfolio is now trading at an attractive absolute valuation level of 5.6% free cash flow yield, and our companies are expected to grow revenues 12.7% compounded annually over the next three years, versus that of the benchmark at 9.2%.<sup>9</sup>
