

A Sub-Fund of Morgan Stanley Investment Funds

Parametric Commodity Fund

PARAMETRIC CENTRALIZED PORTFOLIO MANAGEMENT TEAM

Investors should note that, relative to the expectations of the Autorité des Marchés Financiers, this UCITS presents disproportionate communication on the consideration of extra-financial criteria in its management.

Performance Review

In the three month period ending 31 December 2025, the Fund's Z shares returned 7.25% (net of fees)¹, while the benchmark returned 6.81%.

The Fund primarily relies on three actions in pursuing its investment objectives: reweighting versus the performance benchmark, the Bloomberg Commodity Index Total Return (the "performance Index");² rebalancing; and commodity curve positioning.³

The Fund's reweighting decisions contributed to returns relative to the performance Index during the quarter. The Fund's underweight to crude oil was a leading contributor to performance. An overweight to silver and the inclusion of palladium in the portfolio also contributed to relative results.

The Fund's emphasis on rebalancing back to target weights detracted from performance due to the absence of reversion among commodities in the performance Index during the quarter. Reversion describes the situation where recent relative outperformers become relative underperformers and vice versa. Rebalancing requires selling a portion of the outperforming asset and is beneficial during times of reversion.

Curve positioning also contributed to the Fund's relative performance during the quarter, primarily due to positioning in natural gas.

Market Review

The commodity market, as measured by the Bloomberg Commodity Index Total Return, rose +5.85% in the fourth quarter of 2025. Strong gains in precious metals and industrial metals lifted the performance Index during the period, and were only partially offset by moderate weakness in the energy sector.

The energy sector weighed on the performance Index's results in the fourth quarter. West Texas Intermediate (WTI) and Brent crude oil slumped after the International Energy Agency warned of a possible four million barrel per day surplus in 2026 due to supply increases by the Organization of the Petroleum Exporting Countries and its allies (OPEC+). Prices fell further following a renewed push for a Russia-Ukraine peace agreement that has thus far not come to fruition. Refined crude products such as unleaded gasoline and diesel also struggled as the extended U.S. government shutdown reduced transportation demand. Finally, despite a short cold snap in early winter, temperatures in the U.S. ended the year consistently above long-term averages, weakening heating demand and dragging down the price of natural gas.

Industrial metals finished a stellar quarter with all metals experiencing solid gains. Copper, often referred to as the global economic bellwether, rallied +16.5% in the fourth quarter to pace the sector. In the physical market, participants have increasingly moved copper to U.S. storage, where the metals currently command a premium in anticipation of a potential import duty. Additionally, expectations that Chinese domestic growth will be an economic priority next year was supportive for copper prices. Precious metals continued to outperform the performance Index in the fourth quarter, rising over +20%. However, unlike in previous quarters, silver (+51.0%) dominated gold (+12.2%). Softer U.S. macroeconomic and inflation data increased expectations for future interest rate cuts and provided a sector tailwind. Silver was acutely impacted by tightness in the physical market, which propelled prices even higher.

Within the agriculture group, grains generally increased in the fourth quarter, while soft commodities fell. Soybeans (+2.8%) and soybean meal (+7.7%) rose early in the period following a tariff truce between the U.S. and China, allowing the largest purchaser of American soy to resume imports. Meanwhile, sugar prices (-8.7%) sunk under the weight of a strong rebound in output from Brazil,

² MS INV Parametric Commodity Fund's objective is to provide a return equivalent to the performance of the Barclays Commodity Index Series, excluding fees, by investing in swaps that provide a synthetic exposure to the Barclays Commodity Index Series (with an expected tracking error of less than 1.5% in normal market conditions). For performance discussion purposes in this commentary, the Fund's performance is compared to the Bloomberg Commodity Index Total Return, which is a widely recognized, broad-based measure of commodity market performance, representing 22 commodities that are weighted to account for economic significance and market liquidity. The Fund's portfolio management team believes the comparison to the Bloomberg Commodity Index Total Return can provide a more comprehensive view of the Fund's performance, which is driven by active exposures in commodities, in relation to the broader commodity market.

³ When seeking commodity exposures through futures, an investor has a choice of contracts with a variety of expiration dates. That is, if one is seeking exposure to crude oil, one can purchase a future with delivery next month, the month after that, etc., and each expiration has a distinct price. This is graphically presented as a curve (similar to the yield curve in fixed income). An index generally chooses the futures contract closest to expiration. To attempt to gain outperformance by selecting futures with expiration dates that differ from the index, i.e., to gain exposure through a different position on the curve, is referred to as curve positioning.

India and Thailand, which shifted the market to the largest surplus in seven years. Finally, the livestock sector declined modestly, primarily as a result of a -3.8% loss in lean hogs as carcass weights increased to above average.

Strategy and Outlook

Commentators demonstrate a wide range of opinions regarding the commodity asset class. Regardless of the near-term forecast, the secular trend of increasing demand for raw materials from emerging economies is believed by many to be a permanent feature in the global economy. While commodities may continue to demonstrate remarkable volatility, they may do so against a background of increasing prices.

How does one invest in this space with so much short-term uncertainty? We seek to manage risk through broad diversification,⁴ avoiding concentrations and by rebalancing — all key factors to consider when making investment decisions. Parametric's commodity investment strategy relies on a rules-based approach in combination with a rebalancing discipline to avoid concentration, and aims to seek total return.

Share Class Z Risk and Reward Profile

- The value of financial derivative instruments are highly sensitive and may result in losses in excess of the amount invested by the Sub-Fund.
- The fund relies on other parties to fulfill certain services, investments or transactions. If these parties become insolvent, it may expose the fund to financial loss.
- The prices of commodities can experience greater volatility than other asset classes (such as equities and fixed income) in certain market conditions. Investments in commodities can therefore be riskier than other types of investment.
- There are increased risks of investing in emerging markets as political, legal and operational systems may be less developed than in developed markets.

- Past performance is not a reliable indicator of future results. Returns may increase or decrease as a result of currency fluctuations. The value of investments and the income from them can go down as well as up and investors may lose all or a substantial portion of his or her investment.
- The value of the investments and the income from them will vary and there can be no assurance that the Fund will achieve its investment objectives.
- Investments may be in a variety of currencies and therefore changes in rates of exchange between currencies may cause the value of investments to decrease or increase. Furthermore, the value of investments may be adversely affected by fluctuations in exchange rates between the investor's reference currency and the base currency of the investments.

⁴ Diversification neither assures a profit nor guarantees against loss in a declining market.

terminate its arrangement for marketing that Fund in any EEA country where it is registered for sale, it will do so in accordance with the UCITS rules..

IMPORTANT INFORMATION

This material has been prepared solely for informational purposes and does not constitute an offer or a recommendation to buy or sell any particular security or to adopt any specific investment strategy. Investors should be aware that a diversified strategy does not protect against a loss in a particular market.

All investments involve risks, including the possible loss of principal. The material contained herein has not been based on a consideration of any individual client circumstances and is not investment advice, nor should it be construed in any way as tax, accounting, legal or regulatory advice. To that end, investors should seek independent legal and financial advice, including advice as to tax consequences, before making any investment decision.

The use of leverage increases risks, such that a relatively small movement in the value of an investment may result in a disproportionately large movement, unfavourable as well as favourable, in the value of that investment and, in turn, the value of the Fund.

Investment in the Fund concerns the acquisition of units or shares in a fund, and not in a given underlying asset such as building or shares of a company, as these are only the underlying assets owned.

INDEX INFORMATION

The **Barclays Commodity Index Series** is a rules-based, formulaic

index that aims to provide exposure to a diversified set of commodities. The index comprises a basket of futures contracts (each a "Futures Contract") for 32 commodities (each a "Commodity").

The index is unmanaged and does not include any expenses, fees or sales charges. It is not possible to invest directly in an index.

Any index referred to herein is the intellectual property (including registered trademarks) of the applicable licensor. Any product based on an index is in no way sponsored, endorsed, sold or promoted by the applicable licensor and it shall not have any liability with respect thereto. The Sub-Fund is actively managed, and the management of the fund is not constrained by the composition of the Benchmark.
