Morgan Stanley Investment Funds

Global Opportunity Fund
(Accumulation Share Class)

Investment Objective
Long term growth of your investment.

Investment Approach
The Fund seeks long-term capital appreciation by investing globally in high quality established and emerging companies that the investment team believes are undervalued at the time of purchase. To achieve its objective, the investment team typically favors companies it believes have sustainable competitive advantages that can be monetized through growth. The investment process integrates analysis of sustainability with respect to disruptive change, financial strength, environmental and social externalities and governance (also referred to as ESG).

Investment Team
Kristian Heugh, Head of Global Opportunity Team

Team members may be subject to change at any time without notice.

Class A Shares (% net of fees) vs. Index in USD
Past performance is not a reliable indicator of future results.

Performance of 100 USD Invested Since Inception (Cash Value)

Investment Performance (% net of fees) in USD
Cumulative (%)  Annualised (%) p.a.

Class A Shares -2.46 4.06 54.04 34.82 7.38 48.44 0.56 18.62 74.0 38.61
MSCI All Country World Net Index -18.36 18.54 16.25 26.60 9.41 23.97 7.86 2.36 4.16 22.80

All performance data is calculated NAV to NAV, net of fees, and does not take account of commissions and costs incurred on the issue and redemption of units. The sources for all performance and Index data is Morgan Stanley Investment Management.

The value of the investments and the income from them can go down as well as up and an investor may not get back the amount invested.

Share Class A Risk and Reward Profile

The risk and reward category shown is based on historic data.

- Historic figures are only a guide and may not be a reliable indicator of what may happen in the future.
- As such this category may change in the future.
- The higher the category, the greater the potential reward, but also the greater the risk of losing the investment. Category 1 does not indicate a risk free investment.
- The fund is in this category because it invests in company shares and the fund’s simulated and/or realised return has experienced high rises and falls historically.
- The fund may be impacted by movements in the exchange rates between the fund’s currency and the currencies of the fund’s investments.

This rating does not take into account other risk factors which should be considered before investing, these include:

- The fund relies on other parties to fulfill certain services, investments or transactions. If these parties become insolvent, it may expose the fund to financial loss.
- Sustainability factors can pose risks to investments, for example: impact asset values, increased operational costs.
- There may be an insufficient number of buyers or sellers which may affect the fund’s ability to buy or sell securities.
- Investments in China involves a risk of a total loss due to factors such as government action or inaction, market volatility and reliance on primary trading partners.
- Investment in China A-Shares via Shanghai-Hong Kong and Shenzhen-Hong Kong Stock Connect programs may also entail additional risks, such as risks linked to the ownership of shares.
- There are increased risks of investing in emerging markets as political, legal and operational systems may be less developed than in developed markets.
- Past performance is not a reliable indicator of future results. Returns may increase or decrease as a result of currency fluctuations. The value of investments and the income from them can go down as well as up and investors may lose all or a substantial portion of his or her investment.
- The value of the investments and the income from them will vary and there can be no assurance that the Fund will achieve its investment objectives.
- Investments may be in a variety of currencies and therefore changes in rates of exchange between currencies may cause the value of investments to decrease or increase. Furthermore, the value of investments may be adversely affected by fluctuations in exchange rates between the investor’s reference currency and the base currency of the investments.

Applications for shares in the Fund should not be made without first consulting the current Prospectus and the Key Information Document ("KID") or Key Investor Information Document ("KIID"), which are available in English and in the official language of your local jurisdiction at morganstanleyinvestmentfunds.com or free of charge from the Registered Office of Morgan Stanley Investment Funds, European Bank and Business Centre, 68 route de Trèves, L-2633 Senningberg, R.C.S. Luxembourg B 29 912.

Information in relation to sustainable aspects of the Fund and the summary of investor rights is available at the aforementioned website.

If the management company of the relevant Fund decides to terminate its arrangement for marketing that Fund in any EEA country where it is registered for sale, it will do so in accordance with the relevant UCITS rules.

DEFINITIONS

Active Share is a measure of the percentage of stock holdings in a managers portfolio that differ from the benchmark index (based on holdings and weight of holdings). Active Share scores range from 0%-100%. A score of 100% means you are completely different from the benchmark.

Active Share calculation may consolidate holdings with the same economic exposure. Alpha (Jensen’s) is a risk-adjusted performance measure that represents the average return on a portfolio or investment above or below that predicted by the capital asset pricing model (CAPM) given the portfolio’s or investment’s beta and the average market return. Prior to 6/30/2018 Alpha was calculated as the excess return of the fund versus benchmark. Beta is a measure of the relative volatility of a fund to the market’s upward or downward movements. A beta greater than 1.0 identifies an issue or fund that will move more than the market, while a beta less than 1.0 identifies an issue or fund that will move less than the market. The Beta of the Market is always equal to 1.0. Bloomberg stands for Bloomberg Global Identifier (BGIID). This is a unique 12 digit alphanumerical code designed to enable the identification of securities, such as the Morgan Stanley Investment Funds sub funds at share class level, on a Bloomberg Terminal. The Bloomberg Terminal, a system provided by Bloomberg LP, enables analysts to access and analyse real-time financial market data. Each Bloomberg code starts with the same BGI prefix, followed by nine further characters that we list here in this guide for each share class of each fund. Excess Return or value added (positive or negative) is the portfolio’s return relative to the return of the benchmark. Information ratio is the portfolio’s alpha or excess return per unit of risk, as measured by tracking error, versus the portfolio’s benchmark. ISIN is the international securities identification number (ISIN), a 12 digit code consisting of numbers and letters that distinctly identifies securities. NAV is the Net Asset Value per share of the Fund (NAV), which represents the value of the assets of a fund less its liabilities. Net cash to equity is the ratio of a company’s cash on hand against the total net worth of company. Number of Holdings provided are a typical range, not a maximum number. The portfolio may exceed this from time to time due to market conditions and outstanding trades. R squared measures how well an investment’s returns correlate to an index. An R squared of 1.00 means the portfolio performance is 100% correlated to the index, whereas a low R squared means that the portfolio performance is less correlated to the index. Return on invested capital (ROIC) represents the performance ratio measuring a company’s percentage return on its invested capital, excluding Financial and real estate sectors. Sales growth 3 year forward CAGR is the compound annual growth rate of sales from 2022 to 2025 based on Factset consensus estimates, and Balance Sheet items from latest reported fiscal year. Sales growth 3 year forward CAGR is the compound annual growth rate of sales from 2022 to 2025 based on Factset consensus estimates. It is calculated by [(Sales (2025)) / (Sales (2022))] - 1. Sharpe ratio is a risk-adjusted measure calculated as the ratio of excess return to standard deviation. The Sharpe ratio determines reward per unit of risk. The higher the Sharpe ratio, the better the historical risk-adjusted performance. Tracking error is the standard deviation of the difference between the returns of an investment and its benchmark. Upside/downside market capture measures annualized performance in up/down markets relative to the market benchmark. Volatility (Standard deviation) measures how widely individual performance returns, within a performance series, are dispersed from the average or mean value. Weighted average market capitalization is an average of the market capitalization of stocks comprising a portfolio or index, adjusted by each stock’s weight in
INDEX INFORMATION

The MSCI All Country World Net Index (ACWI) is a free float-adjusted market capitalization
weighted index designed to measure the equity market performance of developed and
emerging markets. The term “free float” represents the portion of shares outstanding that
are deemed to be available for purchase in the public equity markets by investors. The
performance of the Index is listed in U.S. dollars and assumes reinvestment of net dividends.

Annual Report and Semi-Annual Report ("Offering Documents").
herein has not been based on a consideration of any individual client circumstances and is not investment advice, nor should it be construed in any way as tax, accounting, legal or regulatory advice. To that end, investors should seek independent legal and financial advice, including advice as to tax consequences, before making any investment decision. The use of leverage increases risks, such that a relatively small movement in the value of an investment may result in a disproportionately large movement, unfavourable as well as favourable, in the value of that investment and, in turn, the value of the Fund.

Investment in the Fund concerns the acquisition of units or shares in a fund, and not in a given underlying asset such as building or shares of a company, as these are only the underlying assets owned.

The information contained in this communication is not a research recommendation or ‘investment research’ and is classified as a ‘Marketing Communication’ in accordance with the applicable European or Swiss regulation. **MORNINGSTAR**

Ratings as of 30.11.2023. The Morningstar Rating™ for funds, or “star rating”, is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/50% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take into account sales loads.

The Europe/Asia and South Africa category (EAA) includes funds domiciled in European markets, major cross-border Asian markets where material numbers of European UCITS funds are available (principally Hong Kong, Singapore and Taiwan), South Africa, and selected other Asian and African markets where Morningstar believes it is of benefit to investors for the funds to be included in the EAA classification system. © 2023 Morningstar.
