In some cases, the company's physical assets may be used as collateral for bonds. Corporate bonds are considered higher risk than government bonds and hence interest rates are generally higher. **Currency risk** - The currency market is highly volatile. Prices in these markets are influenced by, among other things, changing supply and demand for a particular currency; trade; fiscal, money and domestic or foreign exchange control programs and policies; and changes in domestic and foreign interest rates.

CUSIP stands for 'Committee on Uniform Securities Identification Procedures'. The party who sells the security at the inception of the repurchase agreement and buys it back at maturity is borrowing money from the other party, and the security sold and subsequently repurchased represents the collateral. **Time Deposit** - A deposit in an interest-paying account that requires the money to remain in the account for a specific length of time, often overnight. **Treasury Bill** - An obligation of the U.S. government with a maturity of one year or less. T-bills bear no interest but are sold at a discount. **Treasury Note** - government debt security with a coupon and original maturity of one to 10 years. **Weighted average life (WAL)** - measures the weighted average of the maturities of the portfolio's individual holdings. **Weighted average maturity (WAM)** - measures the weighted average of the maturities of the portfolio's individual holdings, taking into account reset dates for floating rate securities. **Yields** are subject to change with economic conditions.
