In the quarter period ending September 30, 2021, the Portfolio’s I shares returned -8.87% (net of fees), while the benchmark returned -2.99%.

The long-term investment horizon and conviction-weighted approach embraced by the Global Opportunity team can result in periods of performance deviation from the benchmark and peers. Over time, this has led to the strong record we have developed over our product set. The Fund underperformed the MSCI All Country (“AC”) World ex USA Index this period due to unfavorable stock selection and sector allocation.

Our team continues to focus on bottom-up stock selection and the long-term outlook for companies owned in the portfolio; accordingly, we have had limited turnover in the portfolio to date, and we continue to find new ideas for inclusion in the portfolio that meet our strict criteria for quality and long-term value creation.

International equities declined during the period, driven by underperformance in the consumer discretionary, communication services, real estate and materials sectors. Energy, financials and industrials were the only sectors that advanced, outperforming the MSCI AC World ex USA Index.

The portfolio’s sector overweight position and stock selection in consumer discretionary were the greatest overall detractors from the relative performance of the portfolio. Shares of Chinese after-school tutoring provider TAL Education Group, which is no longer owned in the portfolio, were the greatest individual detractor, as shares declined due to new regulation in China that restricts business operations and prohibits foreign beneficial ownership. As of July 26, 2021, the portfolio does not hold any U.S.-listed China education companies.

Within the sector, shares of Chinese social commerce platform Meituan, online luxury marketplace Farfetch Limited and Korean e-commerce platform Coupang also underperformed. Meituan enjoys a strong network effect by offering integrated local services on a single platform with the largest coverage of merchants and users. We believe that Meituan may continue to benefit from urbanization and consumption growth in China.

Stock selection in communication services contributed negatively on weakness in shares of Chinese live-streaming gaming platform HUYA and Spotify Technology SA. Headquartered in Sweden, Spotify is an innovative audio streaming platform with differentiation leadership by leveraging the unique data of 365 million monthly active users, including 165 million paying premium subscribers (Source: Company data as of July 28, 2021), and is in a strong position to expand its user base given its extensive playlists. We believe Spotify’s strong growth can be supported by entering new geographies, investing in its advertising business and expanding the non-music content as well as user experience.

Stock selection in information technology was the greatest overall contributor to the relative performance of the portfolio during the period, on strength in shares of Japanese vision automation and inspection manufacturer Keyence Corporation, Eastern European business services firm EPAM Systems and Dutch payment company Adyen NV. Based on our industry analysis, we believe Keyence Corporation’s differentiation via customization, constant innovation and proprietary fabless manufacturing process positions Keyence to benefit from accelerated growth in automation and artificial intelligence. Adyen is uniquely positioned as a technology company within the payment processing industry that is differentiated from peers with a single stack...

platform, enabling acceptance and processing of cards and local payments globally across its merchants’ online, mobile and point-of-sale channels. We believe that Adyen can benefit from increasing card payment penetration globally, as its offerings increase price transparency while providing industry-leading authorization rates and unified commerce experiences. A sector overweight allocation also contributed positively.

Stock selection in financials contributed positively on strength in shares of HDFC Bank, India’s largest private bank by assets. HDFC Bank has an outstanding liability and deposit franchise, driven by its long operating history, strong brand, extensive branch network and focus on customer service. HDFC Bank also has the largest personal loan and credit card franchise, with strong risk management processes. We believe that HDFC Bank’s cost leadership advantage, coupled with industry-leading digital capabilities, can enable it to continue taking loan and deposit market share amid public sector bank weakness.

Stock selection in health care also contributed positively on strength in shares of Vitrolife. The company is a market leader in media and time-lapse technology catering to the in vitro fertilization (IVF) market. We believe Vitrolife can benefit from its well-executed product development, quality control, and acquisitions and partnerships, furthering the ultimate goal to improve IVF success and fulfill couples’ greatest dream of having a baby.

Stock selection in industrials and consumer staples also contributed negatively, while a sector underweight position in materials contributed positively to relative performance during the period.

**Outlook**

As a team, we continue to focus on bottom-up stock selection and the long-term outlook for companies owned in the portfolio. We assess company prospects over a three- to five-year time horizon and own a portfolio of what we believe are undervalued, high quality companies with diverse business drivers not tied to any particular market environment.

Performance data quoted represents past performance, which is no guarantee of future results, and current performance may be lower or higher than the figures shown. For the most recent month end performance figures, please visit morganstanley.com/im. Investment returns and principal value will fluctuate and fund shares, when redeemed, may be worth more or less than their original cost.

The gross expense ratio is 0.98% for Class I shares and the net expense ratio is 0.98%. Where the net expense ratio is lower than the gross expense ratio, certain fees have been waived and/or expenses reimbursed. These waivers and/or reimbursements will continue for at least one year from the date of the applicable fund’s current prospectus (unless otherwise noted in the applicable prospectus) or until such time as the fund’s Board of Directors acts to discontinue all or a portion of such waivers and/or reimbursements. Absent such waivers and/or reimbursements, returns would have been lower. Expenses are based on the fund’s current prospectus. The minimum initial investment is $5,000,000.

Returns are net of fees and assume the reinvestment of all dividends and income. They are compared to an unmanaged market index. Returns for less than one year are cumulative (not annualized). Performance for one year or more is based on average annual total returns. The returns are reported for Class I shares. Performance for other share classes will vary.

Please keep in mind that high double-digit returns are highly unusual and cannot be sustained. Investors should also be aware that these returns were primarily achieved during favorable market conditions.
RISK CONSIDERATIONS

There is no assurance that a Portfolio will achieve its investment objective. Portfolios are subject to market risk, which is the possibility that the market values of securities owned by the Portfolio will decline and that the value of Portfolio shares may therefore be less than what you paid for them. Market values can change daily due to economic and other events (e.g. natural disasters, health crises, terrorism, conflicts and social unrest) that affect markets, countries, companies or governments. It is difficult to predict the timing, duration and potential adverse effects (e.g. portfolio liquidity) of events. Accordingly, you can lose money investing in this Portfolio. Please be aware that this Portfolio may be subject to certain additional risks. In general, equities values also fluctuate in response to activities specific to a company. Investments in foreign markets entail special risks such as currency, political, economic, market and liquidity risks. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries. To the extent that the Fund invests in a limited number of issuers (focused investing), the Fund will be more susceptible to negative events affecting those issuers and a decline in the value of a particular instrument may cause the Fund’s overall value to decline to a greater degree than if the Fund were invested more widely. Derivative instruments may disproportionately increase losses and have a significant impact on performance. They also may be subject to counterparty, liquidity, valuation, correlation and market risks. Privately placed and restricted securities may be subject to resale restrictions as well as a lack of publicly available information, which will increase their illiquidity and could adversely affect the ability to value and sell them (liquidity risk). China Risk. Investments in China involve risk of a total loss due to government action or inaction. Additionally, the Chinese economy is export-driven and highly reliant on trade. Adverse changes to the economic conditions of its primary trading partners, such as the United States, Japan and South Korea, would adversely impact the Chinese economy and the Fund’s investments. Moreover, a slowdown in other significant economies of the world, such as the United States, the European Union and certain Asian countries, may adversely affect economic growth in China. An economic downturn in China would adversely impact the Portfolio’s investments. Risks of Investing through Stock Connect: Any investments in A-shares listed and traded through Stock Connect, or on such other stock exchanges in China which participate in Stock Connect is subject to a number of restrictions that may affect the Portfolio’s investments and returns. Moreover, Stock Connect A shares generally may not be sold, purchased or otherwise transferred other than through Stock Connect in accordance with applicable rules. The Stock Connect program may be subject to further interpretation and guidance. There can be no assurance as to the program’s continued existence or whether future developments regarding the program may restrict or adversely affect the Portfolio’s investments or returns.

INDEX INFORMATION

The MSCI All Country World Ex-U.S. Index is a free float-adjusted market capitalization weighted index designed to measure the equity market performance of developed and emerging markets, excluding the U.S. The term ‘free float’ represents the portion of shares outstanding that are deemed to be available for purchase in the public equity markets by investors. The performance of the Index is listed in U.S. dollars and assumes reinvestment of net dividends. The index does not include any expenses, fees or sales charges, which would lower performance. The index is unmanaged and not representative of any Morgan Stanley investment. It is not possible to invest directly in an index.
IMPORTANT INFORMATION
The views and opinions expressed are those of the investment team at the time of writing and are subject to change at any time due to market, economic, or other conditions, and may not necessarily come to pass. These comments are not representative of the opinions and views of the firm as a whole. Holdings and sectors/region weightings are subject to change daily. All information provided is for informational purposes only and should not be deemed as a recommendation to buy or sell securities in the sectors and regions referenced.
