Morgan Stanley Pathway Inflation-Linked Fixed Income Fund

Objective: Seeks to generate total return exceeding inflation over an economic cycle

OVERVIEW
PIMCO sub-advises the fund providing a real return actively managed, focused strategy

PROCESS & DIFFERENTIATORS
PIMCO

- **Process**: Uses top-down and bottom-up strategies to seek to obtain the most cost efficient exposure to inflation linked bond markets. Seeks opportunities to capture incremental yield across country, curve, and security positioning in a sustained low real rate environment by: (1) emphasizing countries that offer better relative value, (2) concentrating on curve positioning to incorporate economic outlook and pricing, and (3) responding to differentiated regional responses to central bank activity.

- **Differentiator**: The fund leverages PIMCOs dedicated cash management team integrated with firmwide resources. PIMCO is one of the largest inflation-linked bond managers globally. The strategy is led by a team of four dedicated portfolio managers with 49 years of combined experience. The team employs a disciplined approach that combines broad global resources with deep bond expertise.

Definitions and Disclosures

Investors should consider the fund’s investment objectives, risks, charges and expenses carefully before investing. The prospectus contains this and other information about the fund. To obtain a free prospectus, please call your Financial Advisor or Private Wealth Advisor, visit us online at www.morganstanley.com/cgcm or call 1-888-454-3965. Please read the prospectus carefully before investing.

Effective January 1, 2019, the CGCM Funds will be renamed the Morgan Stanley Pathway Funds and TRAK CGCM will be renamed TRAK Pathway. Effective on that date, all references to CGCM in this brochure or in any other documents produced or delivered to you by Morgan Stanley refer to the new name.

Consulting Group Advisory Services LLC
The fund’s investment adviser is Consulting Group Advisory Services LLC, a business of Morgan Stanley Smith Barney Holdings LLC. Morgan Stanley Smith Barney Holdings LLC is an affiliate of Morgan Stanley Smith Barney LLC (hereafter collectively “Morgan Stanley”). Each Morgan Stanley Pathway fund may be sub-advised by multiple professional money managers chosen by Morgan Stanley Wealth Management’s Manager Solutions team and reviewed and approved by the fund’s Board of Trustees. The selection of sub-advisers is based on quantitative and qualitative evaluations of the sub-advisers’ skills and investment results in specified asset classes, styles and strategies. Allocation of assets among the sub-advisers is determined by analyzing performance, organizational traits, personnel changes, compliance with the fund’s policies and changes in market conditions. The sub-advisers are not affiliated with Morgan Stanley.

Expense Ratios
Total returns may reflect waivers of certain expenses or, in some cases, waiver and reimbursement of all fund expenses. Such waivers and/or expense reimbursements of expenses would have the effect of increasing the respective fund’s total return. Without the waivers and/or expense reimbursements, the returns would have been lower. Expense waivers may be terminated or revised at any time, at which time expenses will increase and returns may decrease.

Performance and Other Portfolio Information
The performance shown in this document represents past performance. Past performance is no guarantee of future results, and current performance may be higher or lower than the performance shown. Investment return and principal value will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than their original cost. To obtain performance current to the most recent month-end, please go to our website at https://www.morganstanley.com/wealth-investmentsolutions/cgcm/ Year-to-Date (YTD) returns are calculated from January 1 of the reporting year. Average annual total returns assume the reinvestment of income dividends and capital gains distributions at net asset value. Performance results are annualized for periods greater than one year. Returns for periods of less than a calendar year show the total return for the period and are not annualized.

Gross and Net Performance
Gross returns are calculated net of fund internal fees and expenses (such as management fees paid to the manager and 12b-1 fees) but are gross of an annual investment advisory fee (“Advisory Fee”) charged by Morgan Stanley. Net returns are net of fund internal fees and expenses and a maximum Advisory Fee of 2%. Morgan Stanley Pathway Funds are only available within the following Morgan Stanley advisory programs: TRAK Pathway, Select UMA, Consulting Group Advisor, and Portfolio Management. In addition to the Advisory Fee, Select UMA accounts are also subject to a 0.07% Overlay Manager Fee, but this fee is not reflected in the performance shown herein. For specific information about each of these programs, the applicable ADV brochure is available from your Morgan Stanley Financial Advisor or Private Wealth Advisor, or online at http://www.morganstanley.com/adv. The Advisory Fee is calculated by assessing the fee quarterly in the month after quarter end and then compounding those monthly net return rates for various time periods.

Minimum Investment Amount
The minimum initial investment in TRAK Pathway is $5,000. The minimum initial aggregate investment in the Select UMA is $1,000, CGA and PM programs is $10,000.

Definitions
Barclays Capital US Treasury Inflation Protected Securities (TIPS) Index – The Barclays US TIPS Index is an unmanaged market index comprised of all US Treasury Inflation Protected Securities rated investment grade (Baaj / BBB- or better), have at least one year to final maturity, and at least $250 million par amount outstanding.

Lipper Inflation Protected Bond Funds Average – These are equally weighted total returns using all the active funds available within the category. Lipper analytical averages are an average of all funds in the specified investment objective’s universe. Averages include all funds in the group in existence for the period. The number of component funds always changes. Inflation protected bond funds invest primarily in inflation-indexed fixed income securities issued in the United States. Inflation-indexed bonds are fixed income securities that are structured to provide protection against inflation.

Average maturity is a measure computed by weighting the maturity of each security in the portfolio by the market value of the security, then averaging these weighted figures.

Duration is a measure of the sensitivity of the price (the value of principal) of a fixed-income investment to a change in interest rates. Rising interest rates mean falling bond prices, while declining interest rates mean rising bond prices.

Credit Rating Definitions
An obligor rated ‘AAA’ has extremely strong capacity to meet its financial commitments. ‘AAA’ is the highest issuer credit rating assigned by Standard & Poor’s.

An obligor rated ‘AA’ has very strong capacity to meet its financial commitments. It differs from the highest-rated obligors only to a small degree.

An obligor rated ‘A’ has strong capacity to meet its financial commitments but is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligors in higher-rated categories.

An obligor rated ‘BBB’ has adequate capacity to meet its financial commitments. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitments.

*The ratings from ‘AA’ to ‘CCC’ may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

Consider Your Own Investment Needs
This profile is not intended to be a client-specific investment appropriateness analysis or recommendation, an offer to participate in any investment, or a recommendation to buy, hold or sell securities (includes securities of Morgan Stanley and/or its affiliates if shown in this profile).

Do not use this profile as the sole basis for investment decisions. Do not select an investment strategy based on performance alone. Consider all relevant information, including your existing portfolio, investment objectives, risk tolerance, liquidity needs and time horizon.
Definitions and Disclosures

Benchmark Index. Depending on the composition of your account and your investment objectives, any indices shown in this profile may not be an appropriate measure for comparison purposes and are therefore presented for illustration only. Indices are unmanaged. They do not reflect any management, custody, transaction or other expenses, and generally assume reinvestment of dividends, accrued income and capital gains. Past performance of indices does not guarantee future results. You cannot invest directly in an index. Performance of indices may be more or less volatile than any investment strategy. The risk of loss in value of a specific investment strategy is not the same as the risk of loss in a broad market index. Therefore, the historical returns of an index will not be the same as the historical returns of a particular investment strategy.

Fund Holdings. Holdings are subject to change daily. Sector weightings are based on industry standard sector identification codes. Sector allocations and credit quality exposure are measured as a percentage of the total portfolio in terms of asset value. These holdings and allocations are subject to change at any time and may not reflect the Fund's current composition.

Other Data. Other data in this profile is accurate as of the date this profile was prepared unless stated otherwise. Data in this profile may be calculated by Morgan Stanley Smith Barney LLC or a third party service provider.

Key Risk Considerations

Asset allocation and diversification do not assure a profit or protect against loss.

Bonds are subject to interest rate risk. When interest rates rise, bond prices fall; generally the longer a bond's maturity, the more sensitive it is to this risk. Bonds may also be subject to call risk, which is the risk that the issuer will redeem the debt at its option, fully or partially, before the scheduled maturity date. The market value of debt instruments may fluctuate, and proceeds from sales prior to maturity may be more or less than the amount originally invested or the maturity value due to changes in market conditions or changes in the credit quality of the issuer. Bonds are subject to the credit risk of the issuer. This is the risk that the issuer might be unable to make interest and/or principal payments on a timely basis. Bonds are also subject to reinvestment risk, which is the risk that principal and/or interest payments from a given investment may be reinvested at a lower interest rate.

Bonds rated below investment grade may have speculative characteristics and present significant risks beyond those of other securities, including greater credit risk and price volatility in the secondary market. Investors should be careful to consider these risks alongside their individual circumstances, objectives and risk tolerance before investing in high-yield bonds. High yield bonds should comprise only a limited portion of a balanced portfolio.

Treasury Inflation Protection Securities' (TIPS) coupon payments and underlying principal are automatically increased to compensate for inflation by tracking the consumer price index (CPI). While the real rate of return is guaranteed, TIPS tend to offer a low return. Because the return of TIPS is linked to inflation, TIPS may significantly underperform versus conventional U.S. Treasuries in times of low inflation. There is no guarantee that investors will receive par if TIPS are sold prior to maturity.

Loss of money is a risk of investing in the Fund. The Fund’s principal risks include:

Market risk, which is the risk that stock prices decline overall. Markets are volatile and can decline significantly in response to real or perceived adverse issuer, political, regulatory, market or economic developments in the U.S. and in other countries. Market risk may affect a single company, sector of the economy or the market as a whole.

Interest rate risk, which is the risk that interest rates rise and fall over time. When interest rates are low, the Fund’s yield and total return also may be low. When interest rates rise, bond prices generally fall, which might cause the Fund’s share price to fall. When the Fund holds variable or floating rate securities, a decrease (or, in the case of inverse floating rate securities, an increase) in market interest rates will adversely affect the income received from such securities and the net asset value of the Fund’s shares.

Mortgage-backed securities risk, exists when the Fund invests in mortgage-backed securities, which represent an interest in a pool of mortgages. Mortgage backed securities are subject to prepayment and extension risk as well as the risk that underlying borrowers will be unable to meet their obligations.

Asset-backed securities risk, exists when the Fund invests in asset-backed securities which are structured like mortgage-backed securities, but instead of mortgage loans or interests in mortgage loans, the underlying assets may include such items as motor vehicle installment sales or installment loan contracts, leases of various types of real and personal property, and receivables from credit card agreements. Asset-backed securities are subject to many of the same risks as mortgage-backed securities including prepayment and extension risk. The ability of an issuer of asset-backed securities to enforce its security interest in the underlying assets may be limited.

Liquidity risk, exists when securities are difficult or impossible for the Fund to sell at the time and the price that the Fund would like due to a limited market or to legal restrictions. These securities may also need to be fair valued.

Foreign investment risk, which means risks unique to foreign securities, including less information about foreign issuers, less liquid securities markets, political instability and unfavorable changes in currency exchange rates.

Currency risk, which refers to the risk that as a result of the Fund's investments in securities denominated in, and/or receiving revenues in, foreign currencies, those currencies will decline in value relative to the U.S. dollar or, in the case of hedged positions, the U.S. dollar will decline in value relative to the currency hedged.

Prepayment and extension risks, which means a debt obligation may be paid off earlier or later than expected. Either situation could cause the Fund to hold securities paying lower-than-market rates of interest, which could hurt the Fund's yield or share price.

Securities lending risk, which includes the potential insolvency of a borrower and losses due to the reinvestment of collateral received on loaned securities in investments that default or do not perform well.

Manager risk, which is the risk that poor security selection by a Sub-adviser will cause the Fund to underperform. This risk is common for all actively managed funds.

The Fund may experience a higher portfolio turnover rate, which can increase the Fund's transaction costs and more taxable short-term gains for shareholders.

Multi-manager risk, which is the risk that the investment styles of the Sub-advisers may not complement each other as expected by the Manager. The Fund may experience a higher portfolio turnover rate, which can increase the Fund’s transaction costs and more taxable short-term gains for shareholders.

Issuer risk, which is the risk that the value of a security may decline for reasons directly related to the issuer, such as management performance, financial leverage and reduced demand for the issuer's goods or services.
Definitions and Disclosures

For more information on the risks of investing in the Fund please see the "Fund Details" section in the Prospectus.
